

## Exercise – Version Control

---

- 1) Using the Version Control handout specified by your teacher, create a working copy of the school's repository on your computer
- 2) Pull all the files down
- 3) Make a new folder with your name and upload a txt file
- 4) Make a change to the file and resubmit
- 5) Make a change to the file and then revert back to an unmodified version
- 6) Delete the file using delete on the keyboard and then update the folder
  - a. Notice that the file still exists on the server!
- 7) Delete the file from the repository and make sure you use the delete in the version control and not just hit delete on the keyboard
- 8) Upload all of your tutorials and exercises, remembering to remove any garbage that might be left behind (ie debug files, intellisense files, etc...)
